Problem : Given an integer array `nums`, return `true` if any value appears at least twice in the array, and return `false` if every element is distinct.

1	2	3	1

Example 1:

```
Input: nums = [1,2,3,1]
Output: true
```

Example 2:

```
Input: nums = [1,2,3,4]
Output: false
```

Solution:

Using Set data Structure:

    If arr[i] exist in set:

        Return true

    Else

        set.add(arr[i])
